(54) Title: HANDLING CAPACITY BOTTLENECKS IN DIGITAL NETWORKS

(57) Abstract: The invention relates to a method of handling capacity bottlenecks in digital networks, particularly digital home networks, in which at least two apparatuses or applications with public interfaces for influencing the internal resource allocation in a system have access to the resources of a data transfer medium having a non-constant bandwidth. In the case of a resource bottleneck, the data transfer rate of that data stream is reduced whose effect on the associated application is least observed by the user.
